Department of Computer Science and Engineering
ASSESSMENT TOOL 1 – APPLICATION BASED QUESTIONS

Course Code:	CSA06	Course Title:	Design and Analysis of Algorithms
CO Assessed:	CO1 – Precision (BL1, BL2, BL3)	Assessment:	Assessment Tool 1 – Application Based Questions
Weightage:	40% of CIA	Total Marks:	100 (2 Questions × 50 Marks)
CO1 Statement:	<i>Determine algorithm efficiency using asymptotic notations and mathematical techniques including Master Theorem and substitution method. (BL1, BL2, BL3)</i>		
Student Name:	Raihan Hussain	Reg. No.:	192425342
Section / Batch:	2024-2028	Date:	17/07/2026

Instructions to Students

- Answer BOTH questions. Each question carries 50 Marks. Total: 100 Marks.
- Clearly show all steps in derivations and complexity analysis.
- Use proper asymptotic notation (Big-O, Big-Θ, Big-Ω) wherever required.
- Justify each step in recurrence solving using appropriate methods.
- Neat presentation and logical explanation are mandatory

Question Type	Focus Area	Questions	Marks
Application-Based Questions	Apply Master Theorem and asymptotic analysis to real-world scenarios	Q1 – Q2	Q1 –50 Q2 –50
GRAND TOTAL:		100 Marks	

SECTION A – APPLICATION BASED QUESTIONS

Q1. Application: Weather Forecasting Simulation System

A weather simulation system uses two algorithms with complexities $O(n \log n)$ and $O(n^2 \log n)$. Analyze both algorithms using asymptotic notation and compare their growth rates. Explain how each algorithm performs as the dataset size increases. Determine which algorithm is more efficient for large-scale simulations. Justify your answer based on computational efficiency and scalability.

Programiz Python Online Compiler

main.py

```

33- for n in sizes:
34-
35-     start = time.time()
36-     algorithm_A(n)
37-     end = time.time()
38-     time_A = end - start
39-
40-     start = time.time()
41-     algorithm_B(n)
42-     end = time.time()
43-     time_B = end - start
44-
45-     print(f"\nInput Size (n) = {n}")
46-     print(f"Algorithm A O(n log n): {time_A:.6f} seconds")
47-     print(f"Algorithm B O(n^2 log n): {time_B:.6f} seconds")

```

Output

```

=====
Input Size (n) = 100
Algorithm A O(n log n): 0.000070 seconds
Algorithm B O(n^2 log n): 0.005528 seconds

Input Size (n) = 200
Algorithm A O(n log n): 0.000112 seconds
Algorithm B O(n^2 log n): 0.024697 seconds

Input Size (n) = 500
Algorithm A O(n log n): 0.000369 seconds
Algorithm B O(n^2 log n): 0.171865 seconds

```

Level up your college

Q2. Application: Online Learning Recommendation System

An online learning platform processes user interaction data using the recurrence $T(n) = T(n-1) + n$. Apply the substitution method to expand the recurrence step-by-step and derive the final time complexity. Clearly show intermediate steps and simplify the expression. Analyze how the algorithm performs when the number of users grows rapidly. Interpret the efficiency using asymptotic notation and discuss whether the system is scalable for large educational platforms.

Programiz Python Online Compiler

main.py

```

4- def recurrence(n):
5-     if n == 1:
6-         return 1
7-     return recurrence(n - 1) + n
8-
10- n = int(input("Enter number of users: "))
11-
12- result = recurrence(n)
13-
14- print("\nTotal Operations:", result)
15-
16- print("\nTime Complexity")
17- print("Big-O : O(n^2)")
18- print("Big-Theta : O(n^2)")
19- print("Big-Omega : O(n^2)")

```

Output

```

* Enter number of users: 5

Total Operations: 15

Time Complexity
Big-O : O(n^2)
Big-Theta : O(n^2)
Big-Omega : O(n^2)

RUBRICS FOR CALCULATION

Criteria	Wt.	Level 4 – Exemplary	Level 3 – Proficient	Level 2 – Developing	Level 1 – Beginning
Understanding of Problem Context	20%	Clearly understands the problem and accurately identifies all requirements	Good understanding with minor gaps	Basic understanding; some requirements unclear	Poor understanding or misinterpretation of the problem
Application of Concepts	30%	Accurately applies appropriate concepts to solve complex problems	Applies relevant concepts correctly with minor errors	Applies basic concepts with limited accuracy	Fails to apply appropriate concepts
Problem-Solving Approach	20%	Logical, well-structured, and efficient approach	Mostly logical approach with minor gaps	Basic approach with some inconsistencies	Illogical or unclear approach
Accuracy of Solution	20%	Completely correct solution with proper justification	Mostly correct with minor errors	Partially correct solution	Incorrect or incomplete solution
Clarity	10%	Clear, well-organized, and properly explained solution	Understandable with minor clarity issues	Limited clarity and explanation	Poorly presented and difficult to understand

Marks Evaluation:

Question No.	Understanding of Problem Context (20%)	Application of Concepts (30%)	Problem-Solving Approach (20%)	Accuracy of Solution (20%)	Clarity (10%)	Total Marks
Q1 (50 Marks)						
Q2 (50 Marks)						
Overall Total (100)
